ABOUT ME

A motivated and detail-oriented software developer with hands-on experience building high-performance, scalable solutions through real-world projects. Skilled in solving complex technical challenges with a focus on clean architecture, usability, and long-term maintainability. Eager to contribute fresh perspectives and technical skills in a collaborative development environment while continuously growing through practical experience and mentorship.

EDUCATION

Chitkara University | 2022–2026

Bachelor of Engineering in Computer Science and Engineering (4th Year)

SKILLS

- Languages : Java, C++, Javascript
- Frameworks : React, Node.js
- Database : MySQL, NoSql(MongoDb)
- Version Control: Git, GitHub
- Soft Skills : Rapport building, Team Collaboration, Versatility, Effective Problem-solving

PROJECTS

StockX-AI-Powered Stock Analysis & Prediction Platform (MERN stack & AI/ML) | 2024 Oct-Dec

- Developed a full-stack MERN web application for real-time stock analysis and forecasting, integrating Finnhub API to support 70,000+ tickers with interactive Chart.js visualizations.
- Engineered an LSTM-based prediction model using TensorFlow/Keras, delivering 85%+ accuracy for 30-day price forecasts and seamless integration into the front end.
- Designed and implemented a responsive React.js UI with Framer Motion animations, including 7 core modules: authentication, stock dashboard, portfolio, transactions, news, forecast visualizer, and settings.
- Ensured WCAG-compliant accessibility and 90% mobile responsiveness, resulting in a 85% user satisfaction rate

Employee Management (Full stack) | 2024 Jun-Aug

- Developed a full-stack MERN Employee Management System supporting employee records, attendance tracking, and workgroup management.
- Implemented JWT-based authentication with role-based access (Admin/Manager/Employee).
- Built responsive React.js UI with Tailwind and Chart.js for interactive dashboards, and engineered REST APIs in Node.js/Express with MongoDB for scalable data handling.
- Achieved robust performance and security with middleware-driven validation and optimized queries.

Khabar – Fake News Detection System (Python, ML) | 2024 Jan-Feb

- Developed a fake news classifier using Kaggle datasets and regression models like Logistic Regression and Passive Aggressive Classifier.
- Applied TF-IDF for text vectorization and achieved 95%+ accuracy in binary classification.
- Evaluated performance using confusion matrix and ROC-AUC with Scikit-learn.

CERTIFICATIONS

- Google Cloud Skills Boost-Advanced: Generative AI for Developers Learning Path (September 2024)
- Machine Learning Capstone(Coursera) (May 2024)
- Cloud Data Engineering(Coursera) (April 2024)
- Strategic Leadership: Impact, Change, and Decision-Making Specialization (Dartmouth College) (April 2024)
- Product Ideation, Design, and Management Specialization (University of Maryland, College Park) (October 2023)
